

DIY Kit

- The assembly process was fast and smooth.
- Main issues were related to flex connectors... I am never sure if they are fully seated or not.
- I have misplaced the antenna stickers to the bottom of the back panel... but not a big problem, Wi-Fi and BT works fine. I needed to tape the cables a bit and make sure screen flexi was not touching antenna cables.
- I had to reseal screen flexi as backlight was not stable.

- The trackball ball was defective, but I used a bit of "super glue" to fix it up.
- Overall it is ingenious design (e.g. use of PCB for panels and slot covers) and very high quality make. SLA prints are super nice.
