

# Proxmox

Good VM management OS with some anti-features.

## Getting rid of subscription popup

“ You do not have a valid subscription for this server

```
cd /usr/share/javascript/proxmox-widget-toolkit
cp proxmoxlib.js proxmoxlib.js.bac
```

Open `proxmoxlib.js` with `vi` and find `checked_command` method.

Put `orig_cmd()` in the `success` method after `let res = response.result;` and comment out the entire **if/else** expression.

It should look something like that:

```
checked_command: function(orig_cmd) {
  Proxmox.Utills.API2Request(
    {
      url: '/nodes/localhost/subscription',
      method: 'GET',
      failure: function(response, opts) {
        Ext.Msg.alert(gettext('Error'), response.htmlStatus);
      },
      success: function(response, opts) {
        let res = response.result;

orig_cmd();
/*
        if (res === null || res === undefined || !res || res
          .data.status.toLowerCase() !== 'active') {
          Ext.Msg.show({
            title: gettext('No valid subscription'),
            icon: Ext.Msg.WARNING,
            message: Proxmox.Utills.getNoSubKeyHtml(res.data.url),
```

```
        buttons: Ext.Msg.OK,  
        callback: function(btn) {  
            if (btn !== 'ok') {  
                return;  
            }  
            orig_cmd();  
        },  
    });  
} else {  
    orig_cmd();  
}  
*/  
    },  
},  
);  
},
```

Save and reload the page with **ctrl-R**.  
You should not see the popup any more.

## Connect via SPICE

```
xi virt-viewer  
remote-viewer pve-spice.vv
```
